

**HARVIA**

Sauna & Spa

- ✓ 20% lower particulate emissions
- ✓ 70% lower carbon monoxide emissions
- ✓ 90% larger glass door

## Legend 240 GreenFlame

*Elegance of a larger glass door  
with cleaner combustion*

Fire roars cleanly behind the large glass door of the Harvia Legend 240 GreenFlame woodburning stove, and you can just enjoy the magical and relaxing ambience. The low-emission, durable and easy-to-use sauna heater is suited to medium-sized saunas. Its hefty stone quantity guarantees a traditional, soft saunabath.

The heart of the sauna heater is a fully renewed GreenFlame 20 fire chamber, which has been designed with clean combustion in mind. Thanks to this, its carbon monoxide emissions are about 70% lower than before. Choose a one-of-a-kind handmade Legend and start your own legendary sauna story.

 **GreenFlame**

*Sustainably towards cleaner wood burning*

The Harvia GreenFlame® fire chamber has been optimised with clean combustion in mind. GreenFlame is a part of Harvia's persistent development work on our journey towards even cleaner wood burning.

Thanks to the new kind of air control method of the Harvia GreenFlame® fire chamber, the carbon monoxide emissions are significantly lower than before. The smaller the share of carbon monoxide emissions is compared to the total combustion gases, the cleaner the combustion process.

### Cleaner combustion in the GreenFlame fire chamber

- 1 Air is conducted through the ash box and the hatch to the fire chamber.
- 2 There, the air will be mixed evenly with the combustion process, which leads to clean combustion.
- 3 The hot flue gases will go through the channels in the top part of the sauna heater, efficiently transmitting heat to the heater frame, stones and the whole sauna.
- 4 The combustion gases will exit through the chimney.

Stove: WK200LD

Dimensions: width 600 mm, depth 660 mm, height 835 mm, weight 82 kg

10–24 m<sup>3</sup>

200 kg (AC3020)
